February 17, 2016

Last month, the federal First Responder Network Authority (FirstNet) issued its long-awaited Request for Proposals (RFP) for the deployment of the Nationwide Public Safety Broadband Network, a wireless network designed to facilitate communication and crisis response by federal, regional, state, local and tribal first responders and other public safety personnel. The network will cover all 50 states, as well as the territories and the District of Columbia, and is funded via an initial Congressional outlay of \$7 billion.

FirstNet will award only one contract, requiring prime bidders to assemble large teams of telecommunications service providers and local vendors throughout the nation. With a March 17, 2016, deadline for submission of capability statements, prime bidders are sprinting to assemble their own national networks of telecommunications providers. After reviewing capability statements, FirstNet will select the best-qualified bidders to submit formal proposals, due April 29, 2016.

If you are interested in joining a FirstNet team, act quickly! Subcontractors interested in partnering opportunities can [sign up](#) now to be included on a [Teaming List](#), which FirstNet updates on a weekly basis.
